

Screening the Corridors

The following preliminary criteria will be considered in identifying the Corridor Alternatives Retained for Analysis:

- Traffic
 - Level to which the corridor would improve traffic conditions at existing bridge
 - System Redundancy – How well the corridor would support diversions during maintenance activities on the existing bridge or in case of emergency.
- Engineering
 - Geometric Feasibility
 - Length of crossing and width/depth of the Bay's channel
 - Length of on-land infrastructure improvements
- Environmental and Economic
 - Proximity to environmental resources and sensitive land
 - How the corridor could influence land use
